

Business Objective:

1. Maximize Profitability & Discount Optimization:-

- **The Challenge:** Sales teams might be giving away too many discounts to close deals, unintentionally killing the company's profit margins.
- **Objective:** Analyze the relationship between **Discount (%)** and **Profit Margin (%)** across different regions and product lines. The dashboard must identify which products or regions are "discount-heavy" but "profit-poor" so management can enforce strict discount caps.

2. Product Portfolio Rationalization:-

- **The Challenge:** Electronics move fast. Some products might be taking up valuable inventory space while generating low volume and weak margins.
- **Objective:** Evaluate product performance using a volume-vs-margin matrix. Identify "Star" products (high volume, high margin) to scale up, and "Underperformers" (low volume, low margin) that should be phased out or redesigned.

3. Operational Efficiency & Supply Chain Reliability:-

- **The Chain:** Shipping delays damage customer trust, while expedited shipping modes (**Overnight**, **Express**) eat into the bottom line.
- **Objective:** Monitor the fulfillment pipeline by tracking the average days to ship (**Ship Date - Order Date**) and the **Delivery Status** (Delayed vs. Returned). The goal is to pinpoint logistics bottlenecks in specific cities or regions and optimize the balance between shipping costs and delivery speed.

4. Customer Retention & Market Segmentation:-

- **The Challenge:** Marketing budgets are limited, and Beta Electronic Inc. needs to know exactly where its most loyal and profitable customer segments live.
 - **Objective:** Segment revenue and customer satisfaction scores (**Customer Rating**) by **Customer Segment** (Consumer, Corporate, Education) and **Sales Channel**. This will allow the marketing team to target high-value groups with tailored campaigns and address clusters showing low satisfaction.
